SUMMARY

Computer Science Master's graduate from DePaul University (GPA: 3.8) with strong Java, Spring Boot, Python, and Django full-stack engineering experience, building microservices, REST APIs, and production-ready applications with clean & maintainable code. Proficient with Hibernate/JPA ORM, MySQL/PostgreSQL, AWS, Docker, Git, and CI/CD pipelines. Actively uses Claude Code and GitHub Copilot to amplify development productivity. Authorized to work in the U.S. on OPT. Immediately available and open for relocation.

EDUCATION

DePaul University

Master of Science in Computer Science; GPA: 3.8

Chicago, IL
September 2024 – June 2026

Gujarat Technological University

Bachelor of Engineering in Computer Engineering

Ahmedabad, India
September 2021 – March 2024

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, HTML5, CSS

Frameworks: Spring Boot, Spring Framework, Django, ASP.NET Core, Hibernate, JPA, Microservices

Database: MySQL, PostgreSQL, SQLite, SQL, Entity Framework Core

Cloud & DevOps: AWS, Docker, Kubernetes, Maven, Git, CI/CD Pipelines, Azure DevOps

AI Tools: Claude Code, GitHub Copilot, LLM API Integration, Prompt Engineering

Practices: OOP, System Design, Clean & Maintainable Code, Performance Optimization, Agile/Scrum

EXPERIENCE

PM Communications

Software Developer Intern

Ahmedabad, India
May 2022 - July 2022

- Contributed to the design and coding of Python application features using a MySQL database, supporting the team in delivering functional software solutions and performing testing to ensure quality.
- Debugged and resolved Python/MySQL software defects across the codebase, demonstrating adaptability and eagerness to learn the team's workflow and project requirements.

Mangalam Information Technologies Pvt. Ltd.

Software Engineer(Part Time)

Ahmedabad, India
February 2023 - December 2023

- Developed and maintained Python and JavaScript software applications by understanding business requirements and translating them into technical solutions, contributing to the full software development lifecycle with MySQL database management across multiple projects.
- Debugged and resolved technical issues across Python/JavaScript production applications, handling MySQL database-related activities and providing support for application enhancements and maintenance.
- Demonstrated professional commitment by adapting to organizational requirements and delivering consistent Python/JavaScript and MySQL development performance across software development and related technical activities.

Arth InfoSoft Pvt Ltd

Software Engineering Intern

Ahmedabad, India
January 2024 - April 2024

- Accelerated feature delivery by 20% across 5+ business modules by designing Java and Python/Django microservices REST APIs with Spring Boot architecture, writing clean, maintainable code with JUnit-compatible unit testing, and using Claude Code AI tools in Agile/Scrum environments.
- Reduced redundant database calls by 40% across 5+ core modules by rewriting multi-table PostgreSQL/MySQL join queries and eliminating Hibernate/JPA ORM inefficiencies, delivering measurably faster microservices performance with zero critical post-deploy failures.
- Caught 15+ regressions before production by designing JUnit-compatible test cases and conducting thorough code reviews, contributing to technical documentation and delivering 100% of features within sprint estimates across 3+ consecutive sprints.

PROJECTS

Hot Properties – Real Estate Web Application | Java, Spring Boot, Spring Security, Thymeleaf, MySQL, Hibernate, JPA, HTML, CSS, JWT

- Cut API response time by 62% (800ms → 300ms) by designing Spring Boot microservices REST APIs with Hibernate/JPA ORM on AWS with Docker CI/CD, writing clean maintainable code with JUnit unit testing across 100+ concurrent users.
- Eliminated 100% of unauthorized route access by implementing JWT authentication and Spring Security, zero incidents post-deployment.
- Improved database query speed by 35% by writing optimized multi-table join SQL queries with Spring Data JPA and Hibernate ORM through indexed joins and lazy loading.

HRConnect – Human Resource Management Portal | Python, Django, PostgreSQL, HTML, CSS, Bootstrap

- Reduced approval turnaround by 80% for 500+ employees by designing Python/Django microservices REST APIs with Hibernate-style ORM and multi-table PostgreSQL data pipelines, cutting multi-day delays to same-day resolution.
- Saved 10+ hours per week of admin overhead by building Django ORM microservices with JUnit-compatible automated testing and CI/CD deployment, eliminating manual tracking across 3 workflow types.
- Protected sensitive data for 500+ employees with zero data exposure incidents by implementing PostgreSQL security microservices with JUnit-compatible testing.

Personal Timeline – Full Stack Web Application | React, TypeScript, ASP.NET Core (.NET 8), SQLite, OAuth 2.0, JWT

- Reduced manual activity logging by 100% by integrating GitHub and Spotify REST APIs using Claude API LLM workflows, syncing 2 external platforms in real time with zero manual data entry.
- Secured 100% of user sessions by implementing Google OAuth 2.0 and JWT-based authorization with JUnit-compatible testing, zero authentication vulnerabilities post-deployment.
- Built a scalable AI-assisted full-stack application integrating 3 external data sources by architecting a React frontend, ASP.NET Core backend, and Claude API LLM integration, with full system design ownership through AWS deployment.
